

Vello LAG-NEX-CEF AF Compatibility List

The following Canon lenses and Sony cameras have been tested with the Vello LAG-NEX-CEF lens adapter for photo compatibility with some operational limitations. Tests were conducted in AF-S and center point-focusing. Some Sony cameras use one or two types of focusing systems, and performance may vary.

If a lens is not listed, it might not work properly. We'll be testing more lenses and cameras and adding them to this table, so check back for future updates and firmware upgrades.

Note: Remove the adapter's attached tripod foot before mounting the EF 85mm f/1.2L II USM lens.
